SESSION DESCRIPTION:

The rapid convergence of the Internet of Things (IoT), Cloud Computing, Edge Computing, and Machine Learning (ML) is transforming modern digital infrastructure. Connected devices continuously generate large volumes of sensitive data, cloud platforms provide scalable computational resources, and machine learning enables intelligent decision-making across a wide range of applications. However, this convergence also creates a complex and expanding cybersecurity landscape. This special session aims to bring together researchers, academics, industry professionals, and practitioners to discuss emerging security threats, innovative defense mechanisms, privacy-preserving techniques, and trustworthy AI approaches for IoT, cloud, and machine-learning environments.

RECOMMENDED TOPICS:

Topics to be discussed in this special session include (but are not limited to) the following:

- Lightweight cryptography for resource-constrained devices
- IoT authentication and authorization
- Secure device-to-device communication
- IoT intrusion and anomaly detection
- IoT botnets and malware
- Cloud infrastructure security
- Cloud data protection and privacy
- Identity and access management

- Multi-tenant cloud security
- Virtual machine and container security
